

MAXUMIZER® AIR NOZZLES

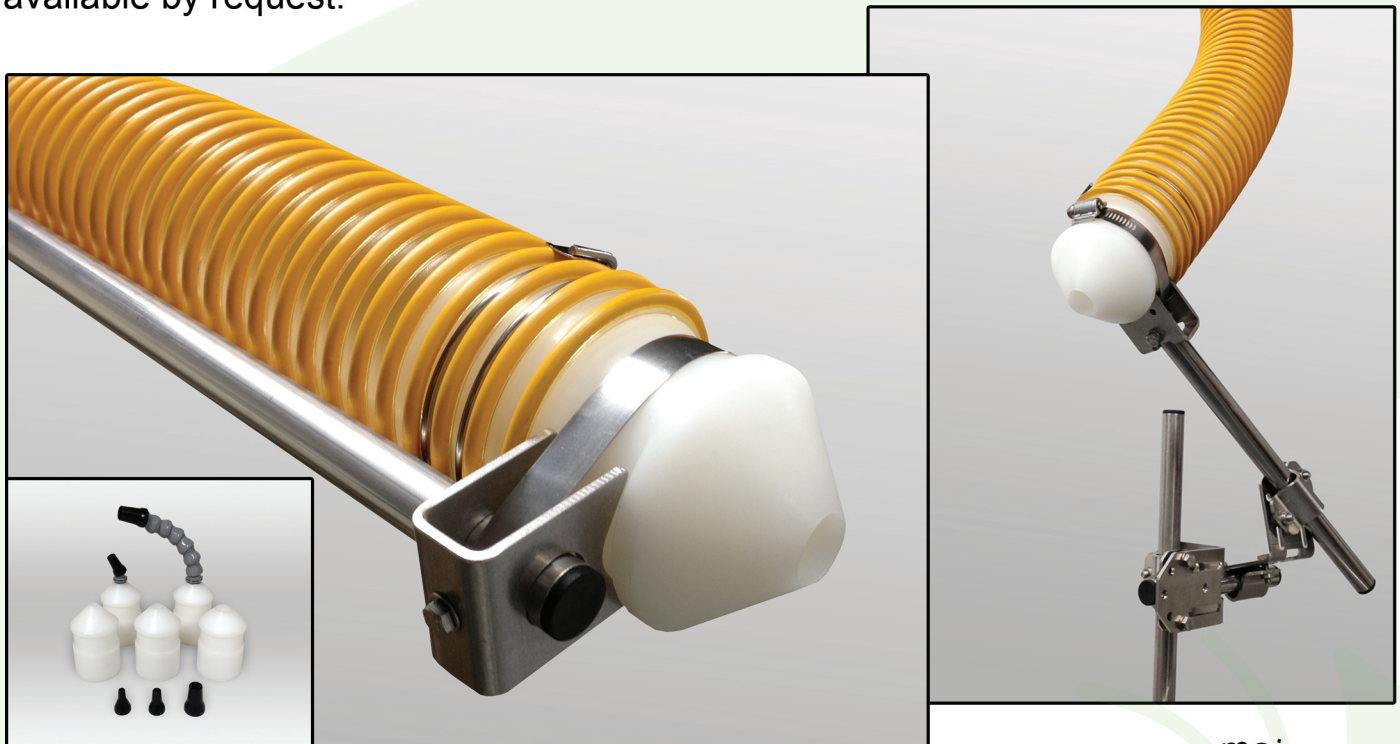

Powerful, blower-driven air, right where you need it!

The Maximizer Air Nozzle is a compact design that produces a powerful, directional flow, of blower-driven air. The internal nozzle design takes up less space and allows for accurate positioning of the blow-off force created by the nozzle.

Maxum offers several mounting clamps designed to work directly with the Maximizer Air Nozzle to provide secure and accurate positioning like no other products available.

The Maximizer Swivel Nozzle is available with several options that provide an additional level of adjustment to “fine tune” your blow-off.

Maxum offers a wide choice of STOCK models, with additional custom products available by request.

Maximum Performance..... Less Hype.
